North American Sensors Corp. Pressure Switches Inc.

Products that make sense
Mission Statement

It is the mission of North American Sensors Corporation to manufacture innovative products for all industries. Our hope is that these products will continually create a benchmark of quality and customer satisfaction. Through these self imposed standards, we will continually strive to surpass industry expectations concerning product and personal performance. All of these pursuits will be conducted with the ultimate goal of becoming the industry leader in sensor manufacturing and technology.

Manufacturer’s Warranty

North American Sensors Corporation warrants its products to be free from defects in material and workmanship when subjected to normal use and service for a period of one year from the date of purchase. This warranty is applicable only to product components that are stationary and not subject to normal wear. This warranty does not apply to products that have been subjected to electrical or chemical damage due to improper use, accident, negligence or abuse. Electrical damage to solid state components, relays, reedswitches or other components will not be covered. Also excluded are products that have been modified or altered, or have electrical cables that have been cut during installation. If anyone other than authorized personnel of NASC attempts to repair the device, this warranty is null and void.

NASC is responsible under this warranty for the repair or replacement of the defective product or components as deemed necessary upon inspection by NASC service personnel. NASC assumes no responsibility for consequential damages to personal or real property, or for injury to any person.

This warranty supersedes all warranties expressed or implied. The suitability of NASC products for a particular application and the implied warranty of merchant ability is excluded from warranty coverage. This warranty may not be expanded or altered other than in writing by an officer of NASC.

Defective products must be shipped to NASC prepaid and insured to the address below within 30 days of the original malfunction. All returned goods must be labelled with a Return Goods Authorization number obtained from NASC customer service. Also include the part number, serial number, name and contact number of someone capable of answering questions regarding the use, operation and liquid contamination of the product, a return shipping address and a description of the problem. All returns will be handled as quickly as possible and the preceding information will help to expedite the return or replacement of the product.
Bilge/Sump Level Switches

NASC’s bilge switches are designed to be installed in ships bilges, tanks and industrial sumps, where it would be bolted to an adjoining structure. Custom configurations are available upon request. Specifications regarding this model may change without notice.

**BLG100/25SSS-X***

Standard Features:
- Clear polycarbonate Slosh Shield
- 316SS Stem, Float and Brackets
- 25 VA Form C Hermetically Sealed Reed Switch
- 4C 18AWG PVC Jacketed Cable
- Water Tight Seal
- Made in the USA

**BLG150/25SSS-X***

- Manual Lift/Test Mechanism

**BLG225/25SSS-X***

Standard Features:
- 316SS Slosh Shield
- 316SS Stem, Float and Brackets
- 25 VA Form C Hermetically Sealed Reed Switch
- 4C 18AWG PVC Jacketed Cable
- Water Tight Seal
- Manual Lift/Test Mechanism
- Made in the USA

-X Options
- STO Cable 16AWG 4C
- Custom Lengths of Cable

*All switches can also be supplied with 100VA form ‘C’ hermetically sealed reed switch.

Note:
The actuation point will vary depending on the temperature and the specific gravity of the individual liquid being detected.
BLG250/25SSS

Standard Features:
- 316SS Slosh Shield
- 316SS Stem, Float and Brackets
- 25 VA Form C Hermetically Sealed Reed Switch
- ABS Approved Cable, 6 ft. Standard
- Water Tight Seal
- Manual Lift/Test Mechanism
- ABS Type Approved
- Made in the USA

For a more rugged design, our BLG250/25SSS-B has a double bracketing system and the slosh shield is tig welded to the brackets and stem.

Quality Pressure, Level, and Temperature Solutions

Bottle Switches (External Mount Level Switches)

Nasc’s line of stainless steel bottle switches are designed to be installed external to marine and industrial tanks to provide a level alarm. It may also be bolted to an adjoining structure for remote mounting. Custom configurations are available upon request. Specifications regarding this model may change without notice.

BTL 500/10SSN

Standard Features:
• 316 Stainless Steel Body
• 316 Stainless Steel Stem & Connections
• Buna Float
• Interchangeable Parts for Easy Maintenance
• 3 # 22 AWG PVC Jacketed Wire
• Hermetically Sealed SPST Reed Switch
• Made in the USA

NASC’s SLS300 is a side mount level switch & actuates at the location it is mounted. Designed to be used in tanks where the top of the tank is inaccessible. We offer this switch with either a 25VA or 100VA reed switch. Specifications regarding this model may change without notice. Consult factory for custom configurations.

SLS300/25SS/4SS

SLS300/25SSS

Options Available:
Mounting: 1” - 3” MNPT or 1” - 4” Flanged.

Note:
1. The actuation point will vary depending on the temperature and the specific gravity of the individual liquid being detected.
2. This product is to be used with an approved NEMA 4X terminal box that is connected to the electrical side of the switch.

Standard Features:
- Precision machined body
- 22 AWG PVC jacketed 4C wire
- 316SS Float
- Delrin Magnet Holders
- Hermetically Sealed SPDT Reed Switch
- Made in the USA

NASC’s SLS90 is designed to interface between two different liquids (i.e., oil & water). The 0.95 specific gravity float enables this unique design to sense when heavier liquids collect in the bottom of storage tanks. Custom configurations are available, consult the factory for more information. Specifications regarding this model may change without notice.

Please fill in all boxes below. A part number will be generated from your selections.

### 1. Sensor Type:
- **MLS** = Multi-Level Switch
- **CLS** = Single-Level Switch
- **GMLS** = Guarded Multi-Level Switch
- **GCLS** = Guarded Single-Level Switch

### 2. Material of Construction:
- **Material Type**
  - **B** = Brass
  - **S** = Stainless Steel
  - **P** = PVC
  - **PP** = Polypropylene

### 3. Switch Mounting:
- **Threaded Connection**
  - **T1000** = 1" MNPT
  - **T1250** = 1-1/4" MNPT
  - **T1500** = 1-1/2" MNPT
  - **T2000** = 2" MNPT
  - **T3000** = 3" MNPT

### 4. Float Protection:
- **SSW** = S.S. Stilling Well
- **PSW** = PCV Stilling Well
- **NFP** = No Float Protection

### 5. Lift Test:
- **NLT** = No lift test mechanism
- **LT** = Lift test (only available on T3000 & F3-8 connections)

### 6. Electrical Connection:
- **C50** = 1/2" MNPT
- **C55** = 1/2" FNPT
- **C70** = 3/4" MNPT
- **C75** = 3/4" FNPT
- **C100** = 1" MNPT
- **C105** = 1" FNPT

### 7. Float Type:
- **Height**
  - **302** = 316 S.S.
  - **501** = 316 S.S.
  - **502** = Ball
  - **503** = Ball
  - **701** = Ball
  - **505** = Cyl.
  - **506** = Cyl.
  - **1001** = Ball

### 8. Float Stops:
- **1** = Setscrew collars (Standard)
- **2** = E-clips (available only for 1/4" pipe)

### 9. Number of Switch-points:
- **IL** = Overall length of unit in inches (bottom of switch mount to end of stem) _______ in
- **L1** = switch-point 1 at _______ in
- **L2** = switch-point 2 at _______ in
- **L3** = switch-point 3 at _______ in
- **L4** = switch-point 4 at _______ in
- **L5** = switch-point 5 at _______ in
- **L6** = switch-point 6 at _______ in

### 10. Switch ID:
- **Switch ID #**
  - **Switch ID**
  - **Switch Watts (VA)**
  - **Contact**
  - **Contact Position**
  - **Max Volts**
  - **Max Amps**
  - **25** = 25VA SPST/SPDT N.O./N.C. 250AC/DC 1.0A
  - **100** = 100VA SPST/SPDT N.O./N.C. 120AC 3.0A

### 11. Common Leads:
- **S** = Each switch has an independent common.
- **C** = Each switch has a shared common

For more information on custom level switches, please call 1-800-259-6874 or send an email to sales@mepinc.com.
DS150

The model DS150 ‘dipstick’ gauge is a mechanical-magnetic level gauge that is designed for high level indicating applications where a non-electrical gauge is required. This gauge works by lifting the internal stock, which has a magnet housing on the bottom, that interlocks with the magnet inside the float. Stick is assembled in different colored (red, yellow, and green) sections. The integral rain cap on top of stick is PVC. Custom configurations are available, consult the factory for more information. Specifications regarding this model may change without notice.

Standard Features:
- 316SS or Carbon Steel Flange (8” Standard)
- 1” 316SS Stem/Housing
- Segmented Anodized Aluminum Stick/Indicator
- 316SS 7” Float
- Made in the USA

Model Code (Example: DS150/L39-M8FSS-F7SS-1SS

- .1 MS33649-4 Pressure Fitting
- .2 Gold Contact Switch
- .5 5A Micro Switch
- .B Base bracket for mounting

* Available only for model 2P (Piston Pressure Switch)
Series 6 Pressure Switch

Key Features
- Explosion Proof, Rated for Hazardous Areas
- Field Adjustable
- Low Pressure Switch Available
- All precision machined Anodized aluminum Construction
- 316SS Pressure Ports Available
- All Markings Laser Engraved into body for long lasting durability and visibility
- 11amp UL recognized micro switch standard, gold plated contacts and 5amp micro switch also available
- UL Approved
- NEMA 4, 4x, 7, 9

** PTR525A (Atmospheric, Zero offset ranges available.)**
Series 150 Pressure Transmitter

The PTR150 is a compact & robust transmitter, providing pressure measurement in the range of 1 to 200 bar. All ranges are available in gauge or absolute format to suit customer requirements. An all laser welded stainless steel construction ensures media isolation. The product is designed to meet the tough environmental conditions experienced by modern day applications.

Key Features

- Compact and rugged construction
- Cost effective
- 1% total error band (-40°C to 105°C)
- High immunity to EMC: 100V/m
- 5V supply: 0.5 to 4.5V ratiometric output
- 8 to 30V supply: 4-20mA or 1 to 5V output
- Packard, M12 or Mini DIN connectors

Hammer Union Pressure Transmitter

This is a 4-20mA output Hammer-Lug Union pressure transmitter. It is ATEX certified for use in Hazardous areas. IP68 rated and is EMC compliant to CE standards. It is available in the 1502 and 2202 union. The option of secondary containment for users that may experience high velocity pressure spikes is available upon request please contact us if you require this additional feature.

Key Features

- Ranges to 15,000psi (1000 bar)
- 0.25% accuracy
- 4-20mA two wire output
- IS - ATEX certified
- Full RFI/EMC immunity compliance
- Sour service standard - Materials comply with NACE MR-DI-75 Revision 03
- Fused ceramic technology
- Shock and vibration tested

Applications

- Drilling instrumentation
- Mud logging systems
- MWD surface sensing
- Wellhead monitoring
- BOP control systems
- Subsea control systems
- Production testing
- Process systems
- Well Cementing

  - Compliant to latest EMC standards.
**Hydrostatic Level Transmitter**

### 460 Hydrostatic Level Transmitter

With thousands of marine liquid level transmitters installed on all classes of ships, from military vessels to tankers, the design of the Series 460 marine level transmitter draws on NASC’s comprehensive marine application experience. Fully compliant with the latest IEC and marine industry standards, the Series 460 rugged construction provides reliable and accurate monitoring of liquids in the harsh environments of shipboard tanks. The Measuring principle of pressure in the Series 460 hydrostatic level transmitter is a diaphragm and L.V.D.T. sensor with power and signal linearization via a remote mounted transmitter. This combines excellent responsiveness and long term stability. The liquid level transmitter has the sensitivity needed to accurately measure shallow tanks but will resist a five times nominal range overload without damage. The all welded level sensor is manufactured from high grade alloys specifically selected for their stability and corrosion resistance. A wide choice of fittings and the remotely mounted amplifier maximizes installation flexibility and serviceability. The Series 460 is maintenance free and contains no active electronic components. A factory sealed cable is supplied with a heavy-duty outer sheath of cross linked polymers, suitable for continuous immersion in sea water, fuels and hydrocarbons. An optional performance cable permits use of the sensor with extreme temperatures limits of -50°C to -148°C.

### Key Features

- Designed and constructed specifically for marine applications with relevant industry body and type application and approvals.
- Full range of connections and sensor mounting options for side-of-tank or IP68 submersible installation.
- Compatible with all common marine liquids and cargo applications: seawater, fuel and lubricating oil, bilge water etc.
- Wide span with a high measurement accuracy, long term stability and exceptional pressure overload resistance.
- Remote transmitter provides ease of access for routine calibrations checks
- Robust construction gives reliable operation and low maintenance cost.

### Dimensional Specifications

![Diagram of Hydrostatic Level Transmitter Series 460](image)
290 Density Transmitter

NASC has designed and developed the Series 290 as a density transmitter specifically for use in the onshore and offshore oil and gas market. It is the first fluid density transmitter that is fully submersible for use on drilling mud, slurry, cement and completion fluids. This density transmitter is rugged yet accurate, providing reliable measurement in the mixing or holding tanks and return sumps. The Series 290 transmitter measures density as a function of differential pressure. Each unit has two pressure sensitive diaphragms mechanically separated by a fixed distance on a mounting pole. The distance between the transmitter's two diaphragms provides a value of the liquid's specific gravity. The diaphragms are protected by enclosure cages to prevent damage from the mechanical impact or debris. These are easily removable for cleaning. The density measurement is made online in real time and is fully compensated for changes in fluid temperature.

Key Features

- Density transmitter for drilling mud, slurry, cement and completion fluids.
- Designed to be installed in mixing, recirculation and storage tanks.
- Simple and flexible pole mounting installation from the top of the tank.
- Remote transmitter suitable for installation in hazardous area.
- Robust and reliable construction for arduous duty and extended service.
- Sensors protected by stainless steel cage easily removed for cleaning.
- Temperature compensated measurement with low thermal sensitivity.
- 2 Wire 4-20mA output signal calibrated to suit the application.

Specifications

Construction: Body assembly 316L Stainless steel with diaphragms Hastelloy C276.
Mounting: Submersed in tank.
Measuring range (Factory calibration)
• 6.67 to 20 pounds / US Gallon
• 0.8 to 2.4 SG / 0.8 to 2.4 kg/l
Customer specific calibration within this range on request.
Minimum density measurement:
• 6.25 Pounds / US Gallons
• 0.75 SG / 0.75 kg/l
Sensor capillary fill fluid: Silicon oil
Operating temperature -10° to 80° C
Hazardous area rating (option) Ex ia IIIC T6

Amplifier Module

Construction: Wall mount GRP enclosure
Enclosure rating: IP65 (IP67 option) / NEMA 4X
Power supply: 12 to 35 Vdc
Signal output: 4 to 20mA dc, 2 wire

Performance

Accuracy ± 0.25% of set span
Temperature coefficient: ± 0.02% set span / °C
Dimensional Specifications

- Pole Adaptor Threaded 3/4" NPT Female
- Sensor Cable
- Sensor Input PG9 Cable Gland
- 4 to 20mA Output Signal Cable Gland, PG9 or Optional M16/M20 as Required
- Sensor Cable Length to Suit
- Removable Diaphragm Protection Cage Assembly (Remove for Cleaning or Calibration Purposes only)
- Mounting Holes 178 x 45mm
- 668mm Approx (26")
- Separation Distance 305mm (12")
- 250mm (10")
- 102mm (4")
- 114mm (4.5")

These RTDs are specifically designed for use in two different process temperature ranges and they provide accurate and repeatable temperature measurement through a range of -328° to 1112°F (-200° to 600°C). Low range wire wound RTDs -328° to 400°F (-200° to 204°C) and low range thin film RTDs -40° to 400°F (-40° to 204°C) are constructed using silver plated copper internal leads, teflon, and other suitable wire insulations with potting compounds to resist moisture penetration. High range RTDs -328° to 1112°F (-200° to 600°C) are constructed with nickel internal leads inside swaged MgO insulated cable to allow higher temperature measurements at the RTD element and to provide higher temperature lead protection along the sheath.

1) RTD type (low temp/high temp, accuracy and element type)
2) Sheath diameter
3) Element connection (2, 3 or 4 wire)
4) Sheath length (insertion length)
5) Fittings/no fittings/sheath bend options
6) Electrical connections and terminations
7) Wire type and terminations

View our detailed literature online on how to order, email or call for customer support. Custom built assemblies with non-standard specifications are available upon request.

Sensing element materials and temperature limits:
- Platinum: -450°F to 1200°F
- Nickel: -150°F to 600°F
- Copper: -100°F to 300°F
- Nickel/Iron: 32°F to 400°F

*Please call for complete model code and description.*
The millivolt potential that is created in the thermocouple conductors differs depending on the materials used. Some materials make better thermocouples than others because the millivolt potentials created by these materials are more repeatable and well established. These thermocouples have been given specific type designations such as Type E, J, K, N, T, B, R and S. The type of T/C used also depends on temperature monitored and environment.

As a general rule, industrial thermocouples can be made to withstand higher temperatures and come in a wider variety of thermocouple types. MgO thermocouples are flexible and have a wider selection of measurement junction configurations. An MgO thermocouple consists of a thermocouple element encased in a metal sheath and hard-packed with magnesium oxide mineral insulation. Thermocouple sheaths are fully annealed and can be formed into different configurations (minimum bend radius is twice the outer diameter of the sheath). The measuring junction can also be sealed from the environment, reducing the potential for contamination issues.

How to Order (see order form on line, email or call for application assistance)
1) Type of thermocouple (J, K, T, etc.) and single or duplex element
2) Sheath diameter
3) Sheath material
4) Measuring junction (grounded, ungrounded, etc.)
5) Fittings/ no fittings/ sheath bends
6) Sheath terminations
7) Electrical transitions
8) Lead wire materials, transitions and length

<table>
<thead>
<tr>
<th>Type</th>
<th>Application Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>E</td>
<td>Recommended for continuously oxidizing or inert atmospheres. Sub-zero limits of error not established. Highest thermoelectric output of the common thermocouple types.</td>
</tr>
<tr>
<td>J</td>
<td>Suitable for vacuum, reducing or inert atmospheres, oxidizing atmospheres with reduced life. Iron oxidizes rapidly above 1000°F so only heavy gauge wire is recommended for high temperature.</td>
</tr>
<tr>
<td>K</td>
<td>Recommended for continuous oxidizing or neutral atmospheres. Mostly used above 1000°F (538°C). Subject to failure if exposed to sulfur. Preferential oxidation of chromium in positive leg at certain low oxygen concentrations causes “green rot” and large negative calibration drifts most serious in the 1500 - 1900°F (816 1038°C) range.</td>
</tr>
<tr>
<td>N</td>
<td>Can be used in applications where Type K elements have shorter life and stability problems due to oxidation and the development of “green rot”.</td>
</tr>
<tr>
<td>T</td>
<td>Usable in oxidizing, reducing, or inert atmospheres as well as vacuum. Not subject to corrosion in moist atmospheres.</td>
</tr>
<tr>
<td>R &amp; S</td>
<td>Recommended for high temperature. Must be protected in a non-metallic protection tube and ceramic insulators. Type R is used in industry, Type S in the laboratory</td>
</tr>
<tr>
<td>B</td>
<td>Same as R &amp; S but has a lower output. Also, has a higher maximum temperature and less susceptible to grain growth.</td>
</tr>
</tbody>
</table>

</table>
A thermowell acts as a barrier between a process medium and the sensing element of a temperature measuring device. It protects against corrosive process media, as well as media contained under pressure or flowing at a high velocity. A thermowell also allows the sensing element to be removed from the application while maintaining a closed system.

Our thermowells are available in 316S.S. and 304S.S.. Other materials available upon request.

**How to Order**

1) Process connection: Flanged, threaded, limited space, socket-weld or weld-in type.
2) Style: Stepped, straight, tapered, lag, lag straight or lag tapered.
3) Bore(inches): .260, .375, .385, .390, .515, .702 or special.
4) Material: Brass, C.S., 304 S.S., 316 S.S., Monel, titanium, hastelloy C, etc.
5) Stem length (inches): L or U dimension
